

Madam Speaker, I rise today to recognize September as National Ovarian Cancer Awareness Month. This is a very important designation because it helps to raise awareness about ovarian cancer and its symptoms.

In the State of Connecticut alone, over 300 women are diagnosed with ovarian cancer each year. It is predicted that 190 women in Connecticut will die from ovarian cancer in 2007. Ovarian cancer is the eighth most common female cancer in Connecticut and the fourth most common cause of female cancer death in the State.

Although in the United States approximately 20,000 women are diagnosed with ovarian cancer each year and an estimated 15,000 women die of the disease, there is currently no screening test for ovarian cancer. Until there is a cure for this disease it is important to support and recognize the hard work that organizations are doing to raise awareness for this disease and its symptoms. I want to commend organizations like the Ovarian Cancer National Alliance, OCNA, for its commitment to ensuring that women are aware of the symptoms of ovarian cancer and for its advocacy on behalf of the women and families who have been touched by this devastating disease.

Early detection of ovarian cancer must be our focus and education and awareness are imperative. Studies have shown that if ovarian cancer is treated before it has spread outside the ovary, the 5-year survival rate is 93 percent. However, only 19 percent of ovarian cancers are found at such an early stage.

I urge my colleagues to join me in recognizing September as National Ovarian Cancer Awareness Month and to work to increase awareness about this deadly disease.
